

Batch of artillery rounds produced together with European partners arrives in Ukraine

26.08.2023, 11:05

The first thousands of 122mm high-explosive artillery rounds with full charge, which are produced in partnership with one of the ammunition holdings of Eastern Europe, were delivered to Ukraine.

122mm artillery rounds are air for D-30 and 2S1 Gvozdika artillery systems, they effectively hit enemy positions, defense lines and armored vehicles, the Ukrainian Armor LLC posted on [Facebook](#).

"The provision of artillerists with such rounds is the key to successful counteroffensive," the company noted.

"Having restored cooperation ties and united manufacturers of components from several European countries, we will continue to deliver thousands of such rounds to Ukrainian defenders," the Ukrainian Armor LLC stressed.

As reported, Minister of Defense of Ukraine Oleksii Reznikov published a photo of a Ukrainian-made Bohdana self-propelled howitzer used at the front and promised that there would be more such howitzers soon.
